

THE LEGACY COLLECTION

Your movie shelf. One more show.

A clear, customer-friendly guide to installing Oliyum Desktop Server, Streaming Converter and Connector on Windows 7 Service Pack 1 x64.

Important legacy-system notice

Windows 7 no longer receives vendor security support. Use this collection only on a trusted private network, keep the computer protected and plan an upgrade to a supported version of Windows.

Your three-part installation

1

Oliyum Desktop Server

Build and manage your personal media library.

2

Oliyum Streaming Converter

Check and prepare media when a format needs extra help.

3

Oliyum Connector

Pair your server with your Oliyum account for secure remote access.

Prepared 14 September 2026 | Windows 7 SP1 x64 | Customer edition

Before you begin

A few minutes of preparation makes the installation smoother and safer.

Computer checklist

- Windows 7 Service Pack 1, 64-bit edition.
- All available Windows security, SHA-2 signing, TLS 1.2 and root-certificate updates.
- A correct date and time, a working internet connection and at least 2 GB of free disk space.
- A trusted home or private network. Do not use public Wi-Fi for the first setup.
- The current Oliyum Windows 7 Legacy installers or the complete legacy bundle.

Protect what matters

- Back up your Oliyum settings and personal library information before replacing an older installation.
- Download only from the official Oliyum download page.
- Compare each file's SHA-256 value with the value displayed on the download page.

Verify a downloaded file

Open Windows PowerShell in the download folder and run:

```
Get-FileHash .\YourInstaller.exe -Algorithm SHA256
```

The result must match the value shown by Oliyum before you run the installer.

Choose your download

- Complete bundle - recommended for a new installation because it keeps all three apps together.
- Individual installer - useful when repairing or updating only one Oliyum app.

A deliberate safety boundary

Windows 7 legacy releases stay separate from current Windows releases and do not replace them automatically.

Install in this order

Complete and check each chapter before moving to the next.

1**Install Oliyum Desktop Server**

Run the Desktop Server installer. If Windows asks for a network type, choose Private network. Open Oliyum Desktop, create the administrator account and confirm that the library page opens.

2**Add your media**

Choose the folders that contain your films and home videos. Allow the first library scan to finish, then open one title to confirm the details and artwork look correct.

3**Install Oliyum Streaming Converter**

Run the Converter installer and open the app once. Return to Oliyum Desktop and confirm that the Converter is ready. Test one short sample only if a file needs conversion.

4**Install Oliyum Connector**

Run the Connector installer. Use the Oliyum address and the private one-time pairing code from your registration email. The code is intended for one server and expires after the stated time.

5**Wait for ready status**

Keep the Connector open until the account, Desktop Server, Connector and secure access indicators are ready. If one remains unavailable, use the troubleshooting page in this guide.

Private details stay private

Never send your password or pairing code in a screenshot or public message. Oliyum Support will not ask you to publish either one.

What pairing changes

Pairing connects this Oliyum Server to your customer account. It does not purchase a licence, charge a payment method or copy your media collection.

Verify, activate and enjoy

Finish with a short acceptance test before adding the rest of your family.

Local viewing test

- Open Oliyum Desktop on the server computer and confirm the library is visible.
- Open one title on another device connected to the same home network.
- Play, pause and seek for at least two minutes. Confirm that sound and picture remain smooth.

Remote viewing test

- Sign in to Oliyum from a device using a different network, such as mobile data.
- Choose the paired server and confirm that it shows Online.
- If remote access is licensed, open one title and confirm playback.

Licensing comes after pairing

Your Customer Administrator can sign in, review pricing and choose the Desktop users and concurrent remote viewers needed. Licence details are delivered only after payment is confirmed or an authorised exception is approved.

Expected result

Your server is paired, your local library works and the people you invite can use only the access you assign to them.

First-day checklist

- Change the temporary administrator password.
- Create a separate Oliyum profile for each person who needs one.
- Keep the Windows computer connected to power and prevent sleep while streaming.
- Keep the legacy computer inside the trusted home network.

Quick help

Start with the simple checks below. They solve most first-installation problems.

An installer will not open

- Confirm that the computer is Windows 7 SP1 x64 and fully updated.
- Download the installer again and compare its SHA-256 value.
- Restart Windows, then run the installer from a local folder.

Desktop Server is not ready

- Open Oliyum Desktop directly and wait for the library page to finish loading.
- Check that the computer is connected to the trusted private network.
- Restart Oliyum Desktop and then reopen the Connector.

The pairing code is rejected

- Enter the most recent code exactly as it appears in the private email.
- Check whether the 24-hour validity period has ended.
- If it expired or was already used, request a new code from your Customer Administrator or Oliyum Support.

Remote viewing is unavailable

- Confirm that the home computer is powered on and Oliyum Desktop is running.
- Check that the Connector shows ready and that remote access is included in your licence.
- Try again from a different network after restarting the Connector.

Still need help?

Contact Oliyum Support with the app name, the message shown on screen and the time the problem occurred. Do not include passwords, pairing codes or personal media.
